"solution" :

1. Customer Summary\nYou are a 34-year-old individual with an annual income of ₹1,800,000, seeking a term insurance policy with a coverage amount of ₹25,000,000. \n\n#### 2. Financial Assessment\nYour annual income of ₹1,800,000 supports your request for a coverage amount of ₹25,000,000. However, it is important to note that the existing cover is currently at ₹0, which may influence the underwriting decision.\n\n#### 3. Medical Assessment\nYou have disclosed that you are a smoker. Smoking is considered a significant risk factor in life insurance underwriting, which can lead to higher premiums.\n\n#### 4. Lifestyle Assessment\nYour smoking habit is noted as a lifestyle factor that impacts your risk profile. It is essential to be transparent about this when applying for insurance, as it affects the underwriting process.\n\n#### 5. BMI Findings\nThere are no current BMI findings available for your profile. However, previous records indicate that you have a height of 175 cm and a weight of 95 kg, which suggests a BMI that may categorize you as overweight. This could also influence the underwriting decision.\n\n#### 6. HLV Findings\nYour Human Life Value (HLV) has been calculated with a multiplier of 20, resulting in a maximum eligible HLV of ₹36,000,000. This indicates that your requested coverage of ₹25,000,000 is within the acceptable range based on your income.\n\n#### 7. Premium Findings\nThe premium quote for your requested coverage is ₹209,375. Given your smoking status and the associated risks, a premium loading is required.\n\n#### 8. Decision\nThe final underwriting decision is that **premium loading is required** due to your smoking habit and potential health risks associated with it.\n\n#### 9. Mandatory Insurance Disclosures\nIt is important to disclose all relevant health and lifestyle information accurately. Failure to do so can lead to complications in the future, including claims being denied.\n\n#### 10.

Conclusion\nIn summary, your application for a term insurance policy of ₹25,000,000 has been assessed, and due to your smoking status, a premium loading is required. This decision is made to ensure that the risk is appropriately managed. If you have any further questions or need clarification, feel free to ask."
